

The First Term English Exam

Part I. Reading

(15pts)

A/ Comprehension

(8 pts)

Read the text carefully and do the activities.

Energy-dense, nutrient-poor, discretionary foods, also known as junk foods, are types of foods which have little or no nutritional value. Young people are often the targets of sneaky advertising tactics by junk food companies. They are bombarded with unhealthy junk-food choices daily, and this can lead to long dietary habits that are difficult to get rid of.

Junk food companies make food convenient, tasty, and affordable, so it has largely replaced preparing and eating healthy homemade meals. It is becoming a part of our everyday lives because of our fast-paced lifestyles. These types of food include burgers, fried chicken, pizza, chips, biscuits, ice-cream; sugar-sweetened beverages like soda; fatty meats like bacon; sugary cereals, and frozen ready meals like lasagna.

Junk food can make you feel tired, bloated, and unable to concentrate. It can also lead to tooth decay and poor bowel habits. It certainly causes obesity and associated diseases, such as heart disease. When junk foods are regularly consumed over long periods of time, the damages to health are increasingly huge.

To lessen the impact of this dangerous type of food, we should aim for high-fiber foods, such as whole grains, vegetables, and fruits; meals that have moderate amounts of sugar and salt; and calcium-rich and iron-rich foods. Healthy foods help to build strong bodies and brains.
