اختبار الفصل الأوّل

المادّة: اللغة الإنجليزية المستوى: 3 علوم تجرببية

## Read the text carefully, then do the following activities:

Computers have become so necessary to modern living that it is difficult to believe that they are a relatively recent invention. Undoubtedly, they have proved to be of great value, but they also have their disadvantages. For one thing, they have added to our large number of crimes another grave one.

Hacking was the first computer crime that most of us became aware of. By using **their** computing expertise, people kwon as hackers can gain unauthorised access to someone else's computer and make use of the data, which they find **there**. They may, for example, get hold of lists of the names of their competitors' clients and use these to build up their own businesses, or they may use hacking as a form of industrial espionage to find out a rival company's plans. Other hacking activities may be more obviously criminal, in that hackers can log on to financial data in someone's computer and either alter it illegally or use it for fraudulent purposes.

The possibility of serious financial fraud has been greatly increased by the modern practice of purchasing goods through the Internet. Apparently, the use of credit cards to pay for such purchases has led to record levels of fraud with many people being swindled out of big sums of money. Banks are working hard to improve online security and to provide safeguards for customers, but fraudsters are working just as hard to improve their fraudulent techniques.

Many computer users worry in case their systems are affected by viruses. The people who introduce such bugs into other people's computer program may not intentionally be committing a crime , but may be doing so as an act of mischief or spite. However, the motive does not really matter to the people whose data has been deleted or altered or whose files have been corrupted.

Computers are part of a highly technical method of working, in which there are constantly new developments. Unfortunately, there is also a constant stream of new developments in the fraud industry associated with computers. Thus all computer users must be on their guard.

## A/ Comprehension: (8pts)

1) Choose the right answer. (0.5pt)

**The text is about**: a) the drawbacks of computers

- b) the excessive use of computers
- c) the unlawful use of computers
- 2) Say whether the following sentences are true or false. (2pts)
- a) Hackers gain entry to people's personal computers purposely.
- b) Illegal access to computers data may result in a good competition between companies.
- c) Using credit cards for online shopping is very practical and safe for consumers.
- d) Some hackers enter to company's account data to accomplish deceptive actions.
- 3) Answer the following questions according to the text. (3pts)

,		data from people's computers	101:

## 6) Classify the following words according to the number of their syllables: (1pt) growth - safeguards - fraudulent - improve

One syllable	Two syllables	Three syllables

Part Two: Written Expression (5pts) Choose One of the following topics.

**Topic One:** Imagine you were appointed Director of Computing Network Security in your country. Write a speech of about 120 words for a press conference in which you talk about the measures you would take to fight cyber criminality (computer crimes).

The following notes may help:

- -to pass though laws to punish hackers prison/fines
- -to organize campaigns to raise people's awareness
- -to encourage victims of computer crimes to denounce hackers
- -to reinforce security systems to use powerful software
- -to invest money to develop new computing security programs

**Topic Two:** Write a composition of about 100 to 120 words about the causes and the bad consequences of buying counterfeit products. Give concrete examples.
